Riedel

Glass is one of mankind s oldest and most versatile working materials and is used in many different areas of day-to-day life. The story of Riedel reads like a revolutionary journey through the last two centuries, back to its origins in 1679. The first glassware came from Riedel at this time. Over the years Riedel was shaped by many people and many different periods of time. All together these were Riedel s ingenious inventors, revolutionaries and creative visionaries. The glass blowers and glass artists were admired by royal houses for their works, loved by collectors and even received an accolade from the pope. With the passage of time, the Riedel family invented not only new techniques, unique colours and engravings, but also developed new creative processes. To this day this craftsmanship is unmistakable in its perfection and shows the experience and devotion to the glass craft. True to the Riedel philosophy: Form follows function, we have selected a suitable assortment for you in our shop.
